To whom it may concern

Mal Hooper has been a pioneer and world leader in developing hyperbaric oxygen therapy in Australia. Despite strong headwinds from the conservative medical community he has developed the Tier system of classifying treatment modalities, and has extensive clinical experience in management of numerous conditions that are now recognised internationally to respond to this form of therapy. He is a world authority on the science and engineering requirements for running hyperbaric oxygen chambers in a safe and accessible way for the community. I highly support the recommendation for him to be awarded a PhD in the field.

Yours sincerely,

JOHN CROCK MBBS MD DA FRACS
